STAT

CONCERNING THE IMPROVEMENT OF THE MODEL BOARD

[REDACTED]

suggestions —

- 1) how fine can you make GR before realism is lost
- 2) stereo vs mono
- 3) off-axis convergence angles (non-symmetrical Conv. 4)
- 4) Interpretability as a function of obliquity
3D stereo pictures
complex sites w/ variable heights
Shadow

no details can be suggested until a design study is made on each but if we figured ± 20 usable photo sets for each

{ missile test stands
Refinery ~~complex~~ complex equipment also tanks
communications site with tall antennas }
